

ABSTRACT

A bamboo grid for a barbeque grill comprises a plurality of natural bamboo strips, a pair of end retainers and a grid mounting set having a metal frame and a pair of grid mounting plates for mounting the grid set. An arch-shaped bamboo grid consists of a plurality of bamboo strips, a pair of end retainers, a clip array, and a grid mounting set having a rectangular steel frame, a pair of handles and grid mounting plates for mounting the bamboo grid. Another type of arch-shape bamboo grid mounting set consists of a rectangular steel frame with a handle, a pair of grid mounting plates disposed at opposite ends of the longer side of the frame for mounting the bamboo strips, a cross rod located at the center of the shorter side of the frame, the grid mounting plates having a plurality of slots and bamboo strip retainers. Another type of a bent down mounting set comprises a steel frame, a pair of grid mounting plates at opposite sides and braces at both ends for mounting a disposable bamboo grids. Another type of a bent up mounting set comprises a steel frame, a bent-up mounting plate at the top center and a pair of braces at both sides for mounting the disposable bamboo grids. A narrow bamboo strip is sliced from a natural bamboo stalk and the surface of the bamboo strip is carved with various decorative incisions not only for decorating, but also for extracting bamboo sap and allowing it to permeate into the cooking meat during broiling.
